

## WHY BUY PVC FREE?

**PVC** is the most **toxic plastic** and is commonly used in toys and figurines. Phthalates, cadmium and lead are often added to make the PVC soft and durable.

**Studies show that these toxic chemicals:**

- *are linked to cancer and kidney damage*
- *can interfere with reproductive systems*
- *can cause damage to nervous systems*
- *can affect the developing brain*
- *are extremely harmful to the environment when disposed of incorrectly*

**PVC BANNED!!** PVC softeners have already been banned from production in toys for babies and toddlers in many European countries, Japan and several US cities.

**BULLYLAND** is dedicated to making toys and figurines that are **safer** for your kids and environment.

**We have removed all PVC** and use only non-toxic paints. Our goal is to educate consumers and provide alternatives to harmful PVC additives while continuing to make award winning, educational, creative and FUN products for kids of ALL ages.
